

I'll analyze each test case against the provided user story and acceptance criteria.

TC-01: Verify CPQ code is generated when a quote is created

****Quality Assessment (Completeness, Clarity, Best Practice):****

1. The test case is relatively clear but lacks specificity in steps and expected results.
2. The precondition is somewhat vague.
3. The test data is minimal.

****Issues:****

- Vague precondition
- Steps could be more detailed
- Expected result could specify the CPQ code format

****Suggestions:****

- Make precondition more specific
- Add detailed steps
- Specify expected result

****Improved Test Case:****

Title: Verify CPQ Code Generation for New Quote

Precondition: User is logged in with Sales Rep role and has access to the CPQ platform.

Test Data: Customer Name: John, Product: Laptop

Steps:

1. Navigate to the CPQ platform → Login page is displayed.
 2. Enter valid sales rep credentials and click Login → User is redirected to the home screen.
 3. Click on "New Quote" button → New quote creation page is displayed.
 4. Enter customer name as John → Customer name field is populated.
 5. Select product as Laptop → Product field is populated.
 6. Click Save → Quote is saved and CPQ code is generated.
 7. Verify the CPQ code format on the screen → CPQ code is in the correct format.
- Final Expected Result: A CPQ code is generated and displayed in the correct format.

TC-02: Check product price is shown after selecting product

****Quality Assessment (Completeness, Clarity, Best Practice):****

1. The test case assumes a created quote and product catalogue data.
2. Steps are clear but lack specificity on navigation.
3. Expected result is clear.

****Issues:****

- Assumes too much preconditions
- Lack of detailed navigation steps

****Suggestions:****

- Clarify precondition
- Add detailed navigation steps

****Improved Test Case:****

Title: Verify Product Price Display After Selection

Precondition: User is logged in with Sales Rep role, a quote is created, and product catalogue is configured.

Test Data: Product: Laptop Pro, Expected Price: \$1200

Steps:

1. Open the existing quote → Quote details page is displayed.
2. Click on product dropdown → List of products is displayed.
3. Select "Laptop Pro" from the list → Product is selected.
4. Wait for price to load → Price is loaded from the price book.
5. Verify the price shown on screen → Price matches the expected price of \$1200.

Final Expected Result: The selected product price is displayed correctly.

TC-03: Verify document is sent for e-signature after price confirmation

****Quality Assessment (Completeness, Clarity, Best Practice):****

1. The test case assumes a quote with confirmed price and e-signature configured.
2. Steps are clear but lack verification of e-signature configuration.
3. Expected result could be more specific.

****Issues:****

- Assumes e-signature configuration
- Lack of verification for confirmation message

****Suggestions:****

- Verify e-signature configuration
- Add detailed verification steps

****Improved Test Case:****

Title: Verify Document Sent for E-Signature

Precondition: User is logged in with Sales Rep role, quote is ready with price confirmed, and e-signature is configured.

Test Data: Customer Email: john@test.com

Steps:

1. Open the quote with confirmed price → Quote details page is displayed.
2. Click on "Send for Signing" button → Document is sent for e-signature.
3. Verify the confirmation message → Confirmation message is displayed.
4. Check customer email john@test.com for the document → Document is in the customer's email.
5. Check status on the quote dashboard → Status shows "Sent".

Final Expected Result: Document is sent to the customer for e-signature.

TC-04: Check discount approval when discount is more than allowed

****Quality Assessment (Completeness, Clarity, Best Practice):****

1. The test case lacks specificity on allowed discount threshold.
2. Steps are vague.
3. Expected result could specify the message.

****Issues:****

- Lack of specificity on allowed discount
- Vague steps and expected result

****Suggestions:****

- Specify allowed discount threshold
- Add detailed steps
- Specify expected result message

****Improved Test Case:****

Title: Verify Discount Approval for Excessive Discount

Precondition: User is logged in with Sales Rep role, quote is created with a product, and discount threshold is configured.

Test Data: Product: Laptop Pro, Price: \$1200, Discount: 20%

Steps:

1. Open the quote → Quote details page is displayed.
2. Enter discount as 20% in the discount field → Discount is applied.
3. Click on Submit → System blocks the quote.
4. Verify the message for manager approval → Message prompts for manager approval.

Final Expected Result: System blocks the quote and requests manager approval.

TC-05: Verify quote status changes to Closed after document is signed

****Quality Assessment (Completeness, Clarity, Best Practice):****

1. The test case assumes document is sent to the customer.
2. Steps are clear but lack verification of signed document.
3. Expected result could specify document availability.

****Issues:****

- Assumes document sent to customer
- Lack of verification for signed document

****Suggestions:****

- Verify document sent to customer
- Add detailed verification steps

****Improved Test Case:****

Title: Verify Quote Status Update After Document Signing

Precondition: User is logged in with Sales Rep role, document is sent to customer for signing.

Test Data: Quote ID: CPQ-2024-001, Customer: John

Steps:

1. Customer opens the email and clicks on the signing link → Document signing page is displayed.
2. Customer signs the document → Document is signed.
3. Sales rep logs in and opens the quote CPQ-2024-001 → Quote details page is displayed.
4. Check the status field on the quote page → Status is updated to "Closed".
5. Verify the signed document availability → Signed document is available.

Final Expected Result: Quote status is updated to "Closed" and signed document is

available.
